Pyspark = python + SQL

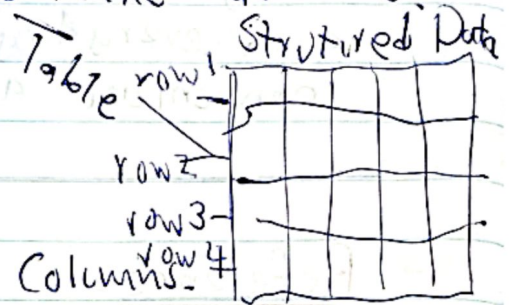

SQL → Python → Pyspark

Data → data is information

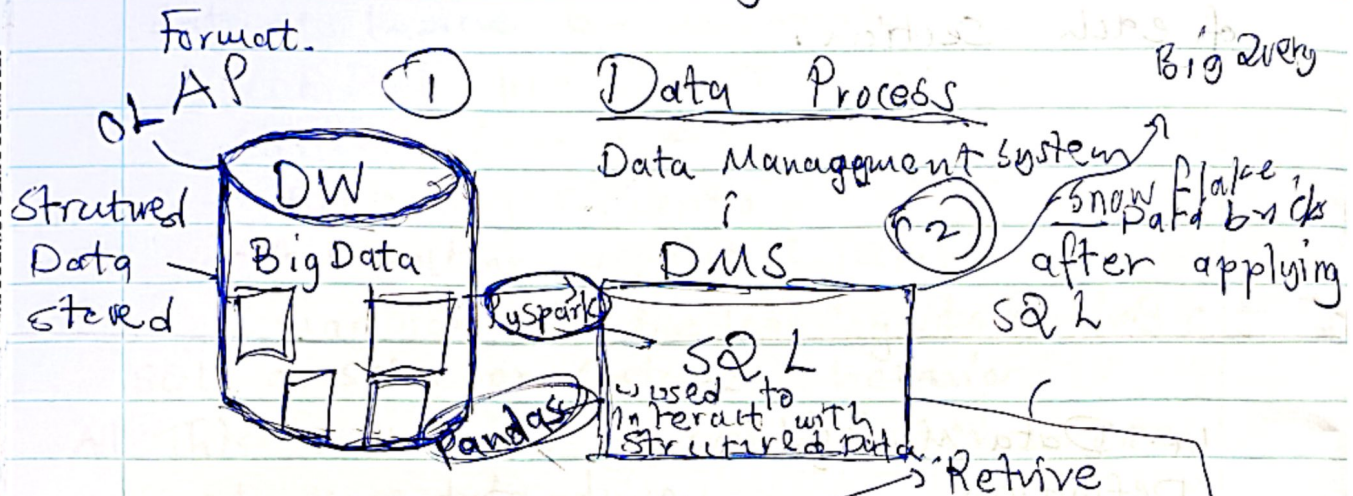

→ we use it to make decisions

Structured Data

- consistent format
- organized data
- stored in rows and columns

• So structured data mostly comes in a table format.

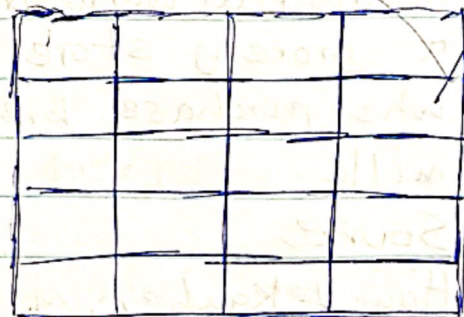

SQL → Structured Query Language

→ This is a language that is used to query structured data

→ Primary language of Programming

SQL

- Data cleaning
- Data Exploration
- Data Inspection
- Data Processing
- Data wrangling
- Data aggregation
- Data joining
- Data filtering

→ You get a summarized data as an output

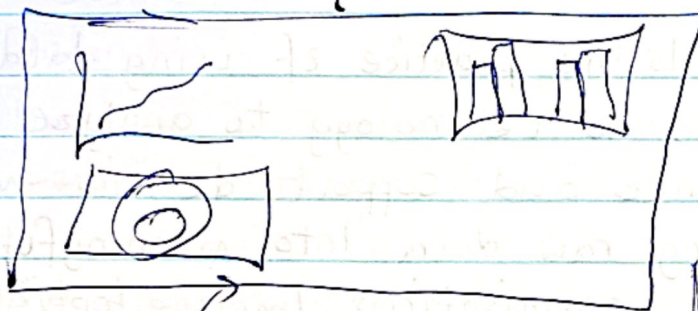

→ specific insights

→ Simplified data

• So when you go on a DMS and do your SQL you do so because you are seeking a specific Information from the Data warehouse

→ So the SQL basically gets you the data (summarized data) that you actually need to analyze and form insights and make informed decisions.

Dashboard using Power BI

Operations

Arithmetic operations

operation	Description
+	Addition
-	Subtraction
/	Division
*	Multiplication
^	Exponent

Comparison Operators

Operation	Description
=	equal to
>	greater than
<	less than
>=	greater or equal
<=	less or equal

Logical Operators

operator	Description
AND	
BETWEEN	
IN	
NOT	
OR	

AS
AS

Aliases - This is a function BETWEEN
Is used to rename

function used to give something a nickname in coding/programming
