Data filtering

WHERE statement

→ It allows us to filter our data based on specific conditions.

→ It affects the Rows not the Columns.

→ you filter rows based on a condition applied into a column.

Syntax:

SELECT	col1, col2, col3	} Where Syntax
FROM	table-name	
WHERE	Condition	

Student-table

Student-Id	Name	Subject	Marks
101	Rofhiwa	Maths	99
102	Mbali	maths	20
103	sipho	Physics	60
104	Tumi	Geo	85

```
SELECT *  
FROM students-table  
WHERE marks > 80;
```

Students-table

Student-Id	Name	Subject	Marks
101	Rofhiwa	Maths	99
104	Tumi	Geo	85

Give a list of students
doing Maths.

AND operator

↳ Both conditions must
be satisfied

```
SELECT *
FROM Students-table
WHERE Subject = 'Maths';
```

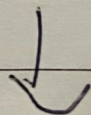

we put maths inside
↓ single quotes because it's
words.

Student ID	Name	Subject	Marks
101	Rafiq	Maths	99
102	Mubali	Maths	20

Question

Give a list of people who
are doing Maths and get
more than 50%

```
SELECT *
FROM Students-table
WHERE Subject = 'Maths'
AND Marks > 50;
```

OR statement

↳ one of the conditions must be met

```
SELECT column(s)
FROM table-name
WHERE condition 1 OR condition 2
```

I want any student
doing Physics or have
marks greater
than 80.

```
SELECT *
FROM student-table
WHERE subject = 'Physics' OR Marks > 80
```

Output ↓

Student-Id	Name	Subject	Marks
101	Rafiq	Maths	99
103	Sophia	Physics	60
104	Tunji	Sci	85

IN operator

```
SELECT columns(s)
FROM table-name
WHERE column IN('value1', 'value2', 'value3');
```

```
SELECT *
FROM Students-table
WHERE Name IN('Maths', 'Physics', 'Geo');
```

Give a list of people doing
~~Maths~~ 'Physics and Geo'

```
SELECT Name,
       Subject
FROM Students-table
WHERE Subject IN('Physics', 'Geo');
```

Name	Subject
Sipho	Physics
Tumi	Geo

IN operator allows you to
do data filtering by
specifying multiple values
in a column.
