Sorting Statements

Allows us to rearrange our data without changing anything in the data

→ It does not ~~impr~~ ~~interfere~~

→ It does not interfere ~~with~~ the quality of the data

- Does not remove or Add anything in the data
- It just re-arranges it.

ORDER BY Statement

Ascending order Descending order

ASC

DESC

Smallest - biggest

Biggest - Smallest

Syntax

Rename the
column

```
SELECT Column 1, (AS) descriptive name  
        Column 2,  
        SUM(Column 3),  
        Column 4  
FROM table-name  
WHERE condition  
Group BY Categorical Column  
ORDER BY Column ASC;  
        want to arrange
```

Product

Product-Id	Product-Name	Revenue
111	apple	2
112	Banana	4
113	orange	3
114	kiwi	5

```
SELECT product-name,  
        Revenue  
FROM Product  
ORDER BY Revenue ASC;
```

↓
output

Product-name	Ravenue
apple	2
orange	3
Banana	4
Kiwi	5

Smallest
Biggest

SELECT Product Name,
Ravenue
FROM Product
ORDER BY Ravenue DESC;

output

Product-name	Ravenue
Kiwi	5
Banana	4
orange	3
apple	2

Biggest
Smallest

LIMIT Statement

→ It allows you to specify the number of rows you to see in your outcome

```
SELECT *  
FROM product  
LIMIT 2 ;
```

Product -Id	Product name	Revenue
111	Apple	2
112	Banana	4

- To filter is to apply a condition to Remove something
- We normally use the LIMIT function to see the structure of the table
- LIMIT is also used for data inspection
