

Aggregate Functions

- ① SUM ()
 - ② AVG ()
 - ③ MIN ()
 - ④ MAX ()
 - ⑤ COUNT ()
- We use them to summarize our data

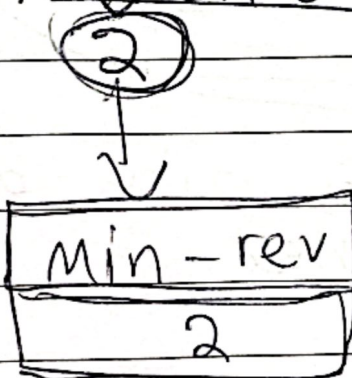

- Returns a single value
- Consolidate the data

An Aggregate function is a function that performs a calculation on multiple rows in a specific column and returns a single value or a single value per group

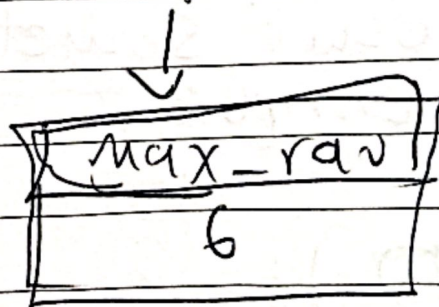

ID	Fruit	Ravenue
102	Apple	4
	Banna	2
101	orange	3
103		
104	Kiwi	6

write

SELECT MIN (Ravenue) AS
FROM products;

SELECT MAX (Ravenue) AS Max-rav
FROM Products;

Products

ID	Fruit	Revenue
102	Apple	4
101	Banna	2
103	Orange	3
104	Kiwi	6

```
SELECT SUM(Revenue) AS totalR  
FROM products;
```

↓

total-revenue
15

The Sum function adds the values together

COUNT()

↳ you count something that can be differentiated
↳ you count something that is unique

COUNT(ID)

- you count something that is unique

Order-Id	Product-Id	ProductN	Revenue
101	111	Banana	10
102	113	apple	7
103	111	Banana	10
104	112	Orange	8
105	111	Banana	10

① How many orders did we get?

SELECT COUNT(Order-Id) As number of orders
FROM Fruits;

↓

num-orders
5

- You cannot sum the ID Numbers, we can only count them we count ids/something unique

① COUNT() → How many rows

② SUM() → Total of a numeric column. adding values like revenue
↳ Addition of values.

- ③ MIN() → smallest value
- ④ MAX() → largest value
- ⑤ AVG() → Average value of a numeric column.

SORTING statements

ORDER BY
 ↗ ASC
 ↘ Ascending order
 (smallest to biggest)

DESC

↳ Descending order

- Biggest to smallest

SELECT *

FROM Products

ORDER BY Revenue DESC;

ID	Fruit	Revenue
104	kiwi	6
102	apple	4
103	orange	3
101	Banana	2
